

Ultimate STEM Environments

This practical workshop explores how we create high quality environments that support STEM thinking and doing. What resources could be provided? What STEM concepts might you observe? What STEM language might you hear? Your environment is a powerful tool in supporting STEM thinking and doing.

The environment is often referred to as the third teacher, and as such, you should be mindful and purposeful in considering the opportunities provided. We will look at some examples of what a great STEM environment looks like, and roll our sleeves up and get busy designing and creating some.
