

Make Your Own STEM Resources

Exploring STEM with children is fun, but it's not all about expensive technology and equipment!

Our **practical and interactive** workshop will spark your curiosity and inspire your imagination, as we make our own STEM Resources. You can even take some of them with you!

We make our own microscopes, pinwheels, light boxes, blocks, kinetic sand, solar ovens, rain gauges, and balancing scales using easily accessible and inexpensive materials.

So, if you're on a tight budget, or would like to involve the children in resourcing their own STEM learning, this workshop is for you!
