

Real World Sustainability

You've got your scraps composting, plastic recycled, cardboard reused and lights off... so what's next?

Are you keen to go to the next level with your response to "embedding sustainability"? Interested in how STEM Thinking supports sustainability?

This session explores Sustainability from a broader perspective incorporating Environmental, Social, Economic and Cultural aspects. We also consider the difference between Sustainability Education and Education for Sustainability.

We look in detail at what embedding sustainability can look like in early years settings and the benefits for children, families and communities, both now and in the future.

After this session you will have a QIP ready plan to take embedding sustainability to the next level!
